

Australia Mobile 5G base station project distribution cabinet

How do I find mobile phone base station sites in Australia?

You can use the Radio Frequency National Site Archive (RFNSA) website to search for active and proposed mobile phone base station sites in Australia. Each site has a dedicated information page that includes the site's location, an Environmental EME Report, the carrier's contact details, and other relevant community consultation information.

Who approves a mobile phone base station?

There are rules telcos must follow to install mobile phone base stations. The decision on who approves a base station depends on several planning factors, including: the classification/zoning of the land. To find out if a base station requires approval under local government, state or territory planning law, please contact your local council.

What happens when a carrier builds a 5G network?

As carriers start to build 5G networks you may see some activity in your area. o Carriers may install telecommunications facilities under state, territory and local planning laws. A carrier may need to submit an application for planning approval, which the council will consider and make a decision on.

How do I find 5g-specific sites?

To locate 5G-specific sites, use the filter to refine your search. The site entry will have different mobile generations noted in circles below the description: A black circle means the indicated mobile technology is active. A blue circle means a carrier is preparing to install the indicated mobile technology within the next 12 months.

What if a mobile phone base station is low-impact?

If a base station is low-impact or no approval is required under the local government, state or territory planning process, telcos consult with you by following the applicable consultation process in the Mobile Phone Base Station Deployment Code. All mobile phone base stations must stay within the safe limits of electromagnetic energy (EME).

What are the benefits of 5G?

o energy usage--more energy efficient. These features will enable more advanced applications and technologies to be used, such as virtual reality, self-driving cars, and smart technologies in your home and business. Facilities to support the 5G network will still need to comply with all relevant Government regulations.
