

Business model of energy storage cabinet batteries

What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

How do business models of energy storage work?

Building upon both strands of work, we propose to characterize business models of energy storage as the combination of an application of storage with the revenue stream earned from the operation and the market role of the investor.

Are energy storage business models fully developed?

Even though the business models are not yet fully developed, the cases indicate some initial trends for energy storage technology. Energy storage is becoming an independent asset class in the energy system; it is neither part of transmission and distribution, nor generation. We see four key lessons emerging from the cases.

Can energy storage disrupt business models?

Energy storage has the potential to disrupt business models. Energy storage has been around for a long time. Alessandro Volta invented the battery in 1800. Even earlier, in 1749, Benjamin Franklin had conducted the first experiments. And the first pumped hydro storage facilities (PHS) were built in Italy and Switzerland in 1890.

How many business models are there for energy storage technologies?

Figure 1 depicts 28 distinct business models for energy storage technologies that we identify based on the combination of the three parameters described above. Each business model, represented by a box in Figure 1, applies storage to solve a particular problem and to generate a distinct revenue stream for a specific market role.

Are business models for energy storage unprofitable or ambiguous?

The main finding is that examined business models for energy storage given in the set of technologies are largely found to be unprofitable or ambiguous.
