

With solar energy mainstreaming across the continent, now is the time for European decisionmakers to put batteries at the centre of a flexible, electrified, energy system.

The EU has today (23 November) launched a grant funding opportunity worth EUR4 billion (US\$4.4 billion) for upstream and downstream clean energy projects, including energy storage.

The European Energy Storage Market Monitor (EMMES) updates the analysis of the European energy storage market (including household storage, industrial ...

A new interactive platform--the European Energy Storage Inventory --has been launched to provide near real-time insights into energy storage deployment across the EU, ...

Energy storage can stabilise fluctuations in demand and supply by allowing excess electricity to be saved in large quantities. With the energy system relying increasingly on renewables, more ...

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be filtered ...

An appropriate deployment of energy storage technologies is of primary importance for the transition towards an energy system. For that reason, this database has been created as a ...

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the energy storage.

The EU has today (23 November) launched a grant funding opportunity worth EUR4 billion (US\$4.4 billion) for upstream and downstream clean energy projects, ...

When it comes to energy storage in Europe, the initial association for most individuals is typically home energy storage. However, with the reduced costs of solar and ...

The European Energy Storage Inventory, developed by the Joint Research Centre (JRC) of the European Commission, is a new interactive platform that maps and analyzes over 1771 energy ...

In November, Altea Green Power began construction of a 1GW battery energy storage system project in Italy, called ~Black Bess". The project, which will consist of four sites ...

About Project Energy storage is one of the key factors to reach EU aims to be climate-neutral by 2050, with a

# EU New Energy Storage System Project

net-zero greenhouse gas (GHG) emissions economy. The decarbonisation and ...

Contrary to an earlier leaked draft document, the final version explicitly mentions energy storage as an included clean technology. Together with the European ...

Innovative thermal energy storage system key to the energy system decarbonisation Thermal energy storage allows excess energy to be stored and used hours, ...

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. ...
