

Energy storage projects and power generation projects

DESRI and California public power utility Sacramento Municipal Utility District on June 19 announced that they have executed a long-term power purchase agreement for the ...

The Department of Energy (DOE) Loan Programs Office (LPO) is working to support deployment of energy storage solutions in the United States to facilitate the transition to a clean energy ...

As load growth accelerates and states race to secure electric power supply, competitive generators across the U.S. are investing in reliable generation capacity, ...

The four longer-duration energy storage demonstration projects will help to achieve the UK's plan for net zero by balancing the intermittency of ...

Listed below are the five largest energy storage projects by capacity in the US, according to GlobalData's power database. GlobalData uses proprietary data and analytics to ...

Both the US and global energy storage markets have experienced rapid growth over the last year and are expected to continue expanding. An estimated 650 gigawatts (GW) ...

In March 2025, the Australian Government released its National Renewable Energy Priority List of projects. Together with states and territories, the Government considered generation, storage ...

Energy storage projects, particularly battery energy storage systems (BESSs), have flooded interconnection queues across North America "overnight". Standalone BESS projects as well ...

In total, these projects amount to 221 MW of new storage capacity and an investment outlay of EUR160 million. These projects were developed by ...

From iron-air batteries to molten salt storage, a new wave of energy storage solutions is set to unlock resilience for tomorrow's grid.

Energy storage has become an integral aspect of the global energy transition, shaping the way we produce, distribute, and consume power. The proliferation of energy ...

Electrical Energy Storage (EES) refers to systems that store electricity in a form that can be converted back into electrical energy when needed. 1 Batteries are one of the most common ...

Energy storage projects and power generation projects

Although developers have added natural gas-fired capacity each year since then, other technologies such as wind, solar, and battery storage have become more prevalent ...

For example, combined heat and power generation such as a pumped heat electrical storage system works well for facilities that have consistent loads, such as hospitals, ...

Historically, energy storage projects qualified for tax credits only if they were co-located with another qualified energy generating project (often a solar project), but recent ...

We're currently working on a number of projects to ensure we manage our energy generation portfolio and continue to deliver reliable, affordable and fair access to clean energy for all ...
