How many amps does a 100W solar panel produce?

In the table above where we compare 100W solar panels, the operating current is how many amps it generates. So a panel with an operating current of 6.1A produces about 6.1 amp-hours an hour. A 100W panel isn't 100% efficient, so you can't expect it to produce 8.3 amps ($100/12$). They usually produce 60-80W in good sunshine.
