

High-voltage charging inverter

What is a high-voltage inverter?

The high-voltage inverter converts direct current (DC) from the batteries or generator to alternating current (AC) to power the traction drive motors.

What is the difference between a battery charger and an inverter?

The inverter converts direct current (DC) from the battery into the alternating current (AC) required by the electric motor to turn the wheels. The charger performs the same task in reverse: the AC voltage is turned into DC voltage in order to charge the battery in a hybrid plug-in vehicle or an all-electric vehicle.

What is a high voltage traction inverter?

High-voltage traction inverter The high-voltage inverter converts direct current (DC) from the batteries or generator to alternating current (AC) to power the traction drive motors.

What is a high transfer efficiency power inverter?

High transfer efficiency is above 90%, complete isolate surge interference of input & output's voltage and current, Impact resistance, super load capacity, built-in AVR stabilizer, continuous stable pure sine wave output. This Power inverter is able to charge the battery bank when AC power is connected to the inverter.

Can a power inverter charge a battery bank?

This Power inverter is able to charge the battery bank when AC power is connected to the inverter. This inverter can ONLY work with 12V battery system. The inverter CAN NOT can in parallel Battery MUST BE connected first 1200 watt is continuous output power, peak power is 3600W Package included:

How does a charge-inverter work?

This charge-inverter allows for both the slow charge and rapid charge function, at no cost, while at the same time offering significant reductions in terms of weight and size. In addition, with its unique architecture that incorporates a voltage step-up, the charger-inverter offers a very high output, and increases autonomy by around 10%.
