What are lithium ion batteries used for?

Since they were introduced in the 1990s, lithium-ion batteries (LIBs) have been used extensively in cell phones, laptops, cameras, and other electronic devices owing to its high energy density, low self-discharge, long storage life, and safe handling (Gu et al., 2017; Winslow et al., 2018).

Can nanotechnology be used in recharging lithium ion batteries?

Icelandic firm Nanom (previously Greenvolt) has raised \$3 million in seed funding in their goal to apply nanotechnology to existing nickel-iron and lithium-ion batteries. In doing so, the company claims to add 9x the energy density, recharging rates and lifecycle capabilities to the century old technology.
