

Is it okay to not use an outdoor power supply outdoors

Can you use a power strip outside?

Using a power strip outdoors can be dangerous unless it is specifically rated for outdoor use. Moisture and power strips don't mix, so always ensure you're using the right type of equipment for outdoor settings to prevent electrical hazards. Using power strips can help manage your home's electrical needs, but safety should always come first.

Are extension cords safe for outdoor use?

To prevent a potentially devastating fire, or serious injury, or death from electrical shock, you'll need a safe extension cord, designed for outdoor use. But, how can you tell if the extension cord you have in mind for the job is safe for outdoor use?

How do you know if a cord is rated for outdoor use?

To identify an extension cord that is rated for outdoor use, look for the letter 'W' on the cord or on the packaging. Cords with this rating have additional insulation around the wires to protect them from the elements.

Is a permanent power outlet necessary?

For lighting, lawn tools used on a regular basis, or power needs for outbuildings, you need a permanent power solution for safety. This can involve an outdoor outlet addition to your home's main structure, or wiring run remotely to an outbuilding.

Do I need a GFCI outlet if I run power outside?

When running power outside, a GFCI-equipped outlet is required by code in all areas exposed to moisture, such as the outdoors, and ensures safety. When adding an outdoor outlet, be sure to choose an outdoor-rated, weatherproof model with built-in, high-sensitivity GFCI.

What is the difference between indoor and outdoor extension cords?

Outdoor extension cords have a sturdy construction that protects them from moisture, sunlight, temperature changes, and other elements that cause rapid deterioration of less durable indoor cords. Their plugs are always three-prong, whereas indoor cords may have either two or three prongs, depending on particular needs.
