

Is the lithium battery pack not very balanced and durable

Why are lithium batteries not durable?

Battery unbalance charge or discharging would reduce charging time and usage time. This is cause of battery is not durable. Lithium batteries affect each other when charging and discharging because the batteries are connected in series. Once a battery is in a bad state, other batteries will also be affected. Thermal runaway is also very easy.

Does a lithium ion battery have a balance problem?

If you built a lithium-ion battery and its capacity is not what you expect, then you more than likely have a balance issue. While it's true that cells connected in parallel will find their own natural balance, the same is not true for cells wired in series. Battery cells in series have no way of transferring energy between one another.

Why is a lithium battery pack designed with multiple cells in series?

Contributed Commentary by Anton Beck, Battery Product Manager, Epec When a lithium battery pack is designed using multiple cells in series, it is very important to design the electronic features to continually balance the cell voltages. This is not only for the performance of the battery pack, but also for optimal life cycles.

Are lithium ion batteries stable?

Lithium-ion batteries are generally stable. But if used improperly, there will be many problems, such as overcharge, overdischarge, thermal runaway, etc. These factors also cause the SOC of each battery to be unbalanced, which affects the service life and safety of the battery.

What is a lithium-ion battery pack?

A lithium-ion battery pack is designed using multiple battery cells in series to meet the voltage requirements of various applications. It is crucial to develop electronic features to balance the cell voltages continually. That is not only for the battery pack's performance but also for optimal life cycles.

Do you know how to balance a lithium battery pack?

Whether you are new to battery building or a seasoned professional, it's totally normal to not know how to balance a lithium battery pack. Most of the time when building a battery, as long as you use a decent BMS, it will balance the pack for you over time. The problem is, this can take a very, very long time.
