

Can solar batteries be installed outdoors?

Some solar batteries can be installed outdoors, but several important considerations must be considered. The feasibility of outdoor installation depends on factors like battery type, climate, and, in some cases, local regulations. The type of solar battery you have or plan to use plays a significant role.

What are the requirements for large PV power plants?

Large PV power plants (i.e., greater than 20 MW at the utility interconnection) that provide power into the bulk power system must comply with standards related to reliability and adequacy promulgated by authorities such as NERC and the Federal Energy Regulatory Commission (FERC).

What is the minimum array area requirement for a solar PV inverter?

Although the RERH specification does not set a minimum array area requirement, builders should minimally specify an area of 50 square feet in order to operate the smallest grid-tied solar PV inverters on the market.

Why is energy availability important in assessing PV systems?

Both energy and availability are necessary metrics for assessing PV systems. If the stakeholders involved in a contract are most interested in energy production, and if the contract holds parties responsible for energy production, then it is crucial that energy losses associated with unavailability and system performance are accounted for.

Why should you track energy availability in a PV operation contract?

Tracking this availability (or unavailability) provides transparency into the equipment reliability state to all parties involved in an O&M services contract. In most PV operation contracts, energy will be the driving factor of whether the system is operating as expected.

How do I choose the right location for my PV system?

After you have sized your PV system based upon the calculated power requirements, you will have to select a location that has maximum sun exposure and limited shading throughout the year. PV arrays can be mounted on rooftops, ground, or another type of structure. Some of the considerations for the array location are:
