

Replacing the power module of the base station circuit breaker

How do I replace a circuit breaker?

RELATED: STEP 1: Mark the breaker in need of replacement and shut off the main power. Set up a flashlight or work light to illuminate the electrical panel. Before removing the panel cover, identify the circuit breaker in question.

Do I need to replace a main breaker?

If you need to replace a main breaker or replace the entire electrical panel, it's best to call a professional. The only way to shut off the power to a main breaker is to call the utility company, so do not attempt to do this on your own. Also, understand that even with the main breaker off, there is still voltage in the panel.

Where is the breaker located?

Breaker located below the meter socket. Replacement parts for the first generation of multi-family metering is limited to the meter socket and breaker base replacement assembly kit MMSRPK. Figure 2 is a photograph of the meter socket and breaker base replacement assembly kit MMSRPK. Figure 2 - WMM44AB Stacks. Please note: We no longer offer replacement horn bypasses or 5th j

How do you install a circuit breaker?

Install the bottom screws before fully tightening the top screws. Once the panel cover is back in place, flip all of the circuit breakers into the "off" position. Next, flip on the main breaker before also flipping each of the circuit breakers into the "on" position, one by one.

What lug kits are available on WB main breaker modules?

WB main breaker modules 200A-1200A. Alternate lug kit options (including 750kcmil) are available. A field installable compression lug landing pad is available as an accessory for standard breaker module 250A-1200A. Compression lug kits must be ordered in addition to the lug landing pad accessory.

How does a power breaker work?

This end of the breaker will begin to pull off of the hot bus bar (the copper bar that distributes the power to the breakers) with a slight rotating motion. Once the breaker lifts off of the bar completely, it will unhook and come right out of the panel.

2) For AC power, remove the power cords from the outlets. 3) For racks with a DC power distribution panel (PDP), turn off the circuit breakers located in the PDP and remove the ...
