Why are energy storage resources important?

Energy storage resources have become an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable energy sources. Currently 23 states, plus the District of Columbia and Puerto Rico, have 100% clean energy goals in place.

What are energy storage technologies?

Energy storage technologies have the unique capabilities to keep the lights on when the power grid is under stress. In both Texas and California, energy storage technologies have prevented black outs during significant heatwaves--keeping people safe, power affordable, and the power on for businesses.

What is the economic value of energy storage?

One study found that the economic value of energy storage in the U.S. is \$228B over a 10 year period.²⁷ Lithium-ion batteries are one of the fastest-growing energy storage technologies³⁰ due to their high energy density, high power, near 100% efficiency, and low self-discharge³¹. The U.S. has 1.1 Mt of lithium reserves, 4% of global reserves.³²

Why is DOE investing in energy storage?

The underlying motivation for DOE's strategic investment in energy storage is to ensure that the American people will have access to energy storage innovations that enable resilient, flexible, affordable, and secure energy systems and supply, for everyone, everywhere.

How are battery energy storage resources developed?

The most significant battery energy storage resource development has occurred in states that have adopted some form of incentive for development, including through utility procurements, the adoption of favorable regulations, or the engagement of demonstration projects.

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).

Several storage technologies are in use on the U.S. grid, including pumped hydroelectric storage, batteries, compressed air, and flywheels (see ...
