What are ground mounted solar panels?

Ground mounted Solar panels simply put are solar panels that you install straight into the ground and not on a higher elevated surface. Similar to solar panels you might see on solar energy farms, ground mounted solar panels can work and operate closely like solar panels on rooftop systems.

What is a ground-mounted solar photovoltaic system?

Ground-mounted solar photovoltaic systems use the same types of solar panels as rooftop systems, but with a different installation process: In a rooftop solar installation, the racking system is designed for an existing structure. On the other hand, when using ground-mounted solar panels, the support must also be constructed.

Are ground mounted solar panels better than roof-system solar panels?

Similar to solar panels you might see on solar energy farms, ground mounted solar panels can work and operate closely like solar panels on rooftop systems. A great benefit is that they do tend to be more efficient than roof-system solar panels and if your roof isn't an ideal candidate, you can add these to anywhere on your property.

Who makes ground-mounted solar panels?

Here are the top five companies that provide ground-mounted solar panels. Qcells: With high-quality solar panels and U.S. manufacturing, Qcells are one of the best in the business. Maxison (formerly SunPower): Maxison has the most efficient panels, but they're expensive. REC Group: REC panels are known to deliver excellent performance.

Where are ground-mounted solar panels installed?

Ground-mounted solar panels are installed anywhere with good sun exposure and sufficient amounts of open space. Depending on your choice of racking system, the solar panels will be positioned a few inches to several feet above the ground. With ground-mounted installations, you have the flexibility to work with solar panels of any size.
